

Check Weigher

GCW Series

An ISO 9001
Certified Company

Innovating since 1977

IPA, the pioneer in Weighing and Automation, has expanded its portfolio with an indigenously developed product designed to control package weights in the FMCG industry. The newly launched low-speed Check Weigher (GCW Series) meticulously weighs each packet exiting the packing line, and rejects any packet with weight that deviates beyond the set tolerance. Despite its classification as a low-speed machine, it can adeptly manage speeds of up to 40 packets per minute, effectively addressing the needs of a majority of packaging lines.

True to IPA's commitment to innovation, the product is entirely developed in-house, with plans to roll out medium-speed and high-speed versions shortly.

SPECIFICATIONS:

- | | |
|----------------------|---|
| • Throughput | 30ppm |
| • Weighing range | 50g - 3000g |
| • Display | 7", Touchscreen, 7 seg
6-digit LED display |
| • Max product width | 170mm |
| • Max product length | 200mm |
| • Industry | FMCG |
| • IP rating | IP51 |
| • Accuracy | +/-1g |
| • Weighing sensor | Oil Damped Load Cell |

Adhering to its tradition of tailored solutions, IPA offers the flexibility to customise this product according to your specific needs. If you have any process-related challenges, simply communicate them to us, and we shall devise a customised solution for you.
